A FIFTY YEAR-LONG STORY OF
TECHNOLOGY AND INNOVATION

Our main aim is to satisfy our customers in terms of quality, prompt deliveries, flexibility, and competitive prices. For this reason, we continue to invest in the most cutting-edge technologies and to address market needs every day with solutions specifically targeted for all types of business activities.

Customer-centric mindset

Today, our customers, whether large or small companies, have become our partners. Together, we have consolidated an experience based on trust, attention to specific problems, and customized products. The quality of our solutions is endorsed by the fact that our range of self-adhesive labels has crossed Italian borders to achieve success on international markets.

Quality is our mission

Artes has always placed strategic importance on guaranteeing an advanced quality system for their customers, in order to provide them with all the necessary certifications in each market sector. The company's Quality System, certified by UNI EN ISO 9001:2015, makes Artes a reliable partner for customers engaged in all segments of national and international markets.

Quality starts from environmental care

Every day we are committed to ensuring that every aspect of the business reflects our care for the environment we live and work in. In recent years, we have introduced a photovoltaic system that covers 50% of the company's energy requirements. All staff members are fully aware of the importance of operating in an environmentally friendly way and have been instructed to do their bit towards improving performance and minimizing the impact of our production.

Consistently with our commitment to the environment, we were the first company in Italy to adopt the waste management project contemplating the processing of production waste for its conversion into EfW (Energy from Waste), for use in cement plants as an alternative to coal. Since 2020, we have partnered the paper recycling system "Cycle4green Recycling", for the recovery of production waste.

We firmly believe in the social and environmental contribution that our company can provide. For this reason, our products and production processes are continuously reviewed and evaluated by external entities certifying their quality and ESG impact.

Speed and flexibility are the salient characteristics of our production methods. In a constantly evolving industry, every day we provide the top manufacturing technologies available on the market. We constantly invest financial resources and human capital to achieve competitive results.

To satisfy our customers' requirements, we offer extreme flexibility and a dynamic organization of production, thanks to multiple interchangeable printing lines and a vast selection of raw materials always in stock.

We have currently introduced two hybrid digital machines of latest generation to our production lines, which have enabled us to further reinforce the our company characteristics. This translates, also thanks to the support of an in-house graphic department, into a timely response to delivery requirements. Naturally, our production lines enable us to offer the market multiple types of self-adhesive labels, also printed with mixed techniques (flexography, screen printing, hot and cold foil, high-resolution inkjet, etc.). Finally, we deploy avant-garde systems enabling us to have 100% control over the end-production.

Today, with over 50 years' experience in the industry, an in-depth knowledge of various production chains, fields of application, technological opportunities, legislative and physical restrictions associated with the materials employed in packaging, we are perfectly placed to supply

a wide range of products that are increasingly impacting and diversified.

We give a tangible form to your ideas

We supply customized graphic design and preprinting services to our customers, with professionals who operate using software specifically designed for each sector.

Our graphic department support the customer, from proof development to press form production, in an on-going collaboration with production to achieve an optimal representative image of the products.

To achieve a further quality upgrade, we have implemented an in-house production system for printing clichés by means of a high-resolution digital technique (HD Flexo), enabling us to equal offset print quality using the most efficient flexographic print.

As well as remaining constantly updated on the evolution of IT systems and their implications on production, we are able to provide innovative solutions to distinguish your brand and more effectively qualify your product offering on the market.

LABELS FOR PRIMARY INDUSTRIES

FOOD

Quality labels to enhance your brand

The provision of self-adhesive labels for the food industry is our core business. Our service quality has enabled us to establish long-term partnerships with our customers, leading players on the Italian and international markets.

CHEMICALS

Resistant labels for industrial purposes

The high quality of our self-adhesive labels is reflected in the trust that leading companies in the chemical, oil and detergents industry have placed in our company. We have developed customized solutions in line with the rapidly evolving requirements expressed by this particular market.

PHARMACEUTICALS

Precise and certified labels

We have acquired a vast experience in the pharmaceutical and parapharmaceutical sector which has enabled us to establish partnerships with our Italian and international customers.

COSMETICS

Refined labels with a special focus on detail

In this sector, attention to detail and rendering are of great importance. We have developed innovative and graphically sophisticated labels for our clientele, which are characterized by a meticulous attention to the rendering of details.

DURABLE GOODS

Durable labels

In this sector, there is a particular need for self-adhesive labels that are resistant to various environmental conditions and to certain properties of the application surfaces. Our labels are tested and certified, they comply with EEC laws and easily pass the toughest tests to which the industry's companies are subjected.
